

Sonographic Measurements of Cervical Length

Patients with a **history of prior spontaneous preterm birth between 17 and 34 weeks** should have already been offered 17OH-Progesterone caproate: 250 mg IM qwk.

If cervical length ≥ 3 cm, reassess every 2 weeks until 23 weeks

If cervical length is 2.5-3cm, reassess weekly until 23 weeks

If cervix is < 2.5 cm, offer cerclage

Patients **without prior SPTB**:

Cervix 2-2.5 cm and less than 19 weeks: reassess after 19 weeks

Cervix 1.5-2 cm: offer vaginal progesterone suppositories (100 mg prepared or 90 mg Crinone) 1 PV qhs

Cervix < 1.5 cm or dilated recommend digital exam: bedrest. Cerclage of unproven efficacy
