You Should Hear What You Are Missing.

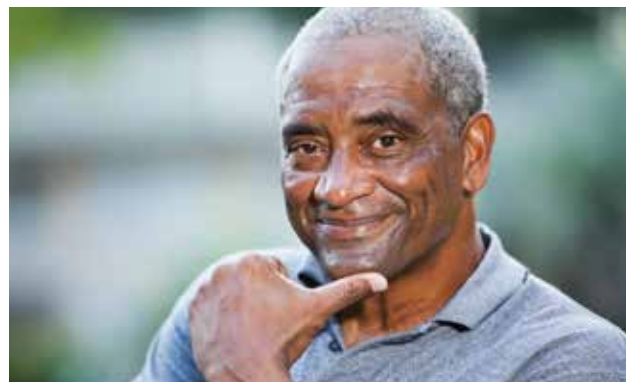

Hearing loss can happen so gradually, many people don't realize what they're missing – or want to admit they're missing anything at all. The diagnosis can often be complex. Sometimes a hearing aid is the answer. Sometimes it isn't.

One thing we know for sure: you're not alone. More than 31 million Americans have some sort of hearing problem, making this the third most common health problem in the country. Once thought of as just a natural part of aging, over half of all people under the age of 65 are deaf and/or hard of hearing.

Care that Lives Up to the Highest Standards. Yours.

With UPMC Audiology at Highland Hospital, all of our patients can be sure they're getting the best hearing health care possible. Since we are affiliated with the University of Rochester Medical Center, you'll have access to the expertise of certified audiologists with the most advanced clinical and research training of any in the area. If test findings suggest that you could benefit from seeing an Ear, Nose, & Throat physician, we will assist you and your primary physician in seeking appropriate follow-up. Rest assured we'll provide you with an appropriate and thorough evaluation to diagnose your hearing problems.

Convenient Location – Trusted and Caring People.

Hearing loss can be stressful enough. That's why we do all we can to make you feel comfortable. We are located just minutes from the 390, 490, and 590 expressways and conveniently located on our Highland Hospital Campus in the Physician's Office Building (POB). From the moment you come in the door, you'll be treated with respect and care. Our staff is as friendly as they are professional. They'll do all they can to assure timely appointments and test results.

Hearing Aids are Just One Possible Solution.

There is so much more to treating hearing loss than being fit with a hearing aid. If it turns out a hearing aid is what you need, we will provide you with an honest assessment and refer you to our office located at Clinton Woods. We can also recommend other reputable practices at your request.

This testing facility is designed to accommodate primarily adult patients that are capable of responding to traditional behavioral test procedures. Young children or individuals with special needs are best accommodated at our UR Medicine Audiology location at Clinton Woods.
