

Empowering the Participant Voice 2024 ANNUAL REPORT

The *Empowering the Participant Voice* survey was emailed to all research participants among a subset of clinical trials conducted at the University of Rochester. Only studies listed in our internal clinical trials system were included. This does not represent all research

conducted by the University. Participants were sent the survey if they enrolled, participated and/or completed a study between June 1, 2023, and May 31, 2024. The survey was sent to 515 participants; 115 (22%) responded. To boost the number of responses, an incentive (\$50 gift card with a 1:25 chance in winning) was offered.

The survey takes about five to ten minutes. Participants completed the survey anonymously and could skip any question.

The survey collected information about:

- How demanding the study is perceived to be
- Satisfaction with the research experience
- Informed consent and any feelings of coercion
- Ease of contacting the research team
- Being treated with respect and courtesy, and being valued

Demographics of respondents

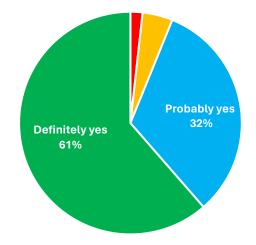

Younger adults and persons from historically underserved populations were less likely to complete the survey.

Demographic category	Subcategory	Number of respondents	Response rate in each category
Age	18-34	9	8%
	35-44	15	13%
	45-54	8	7%
	55-64	20	17%
	65-74	48	42%
	75 and over	15	13%
Ethnicity	No–not Spanish/Hispanic/Latino/a/x	113	98%
	Yes–Spanish/Hispanic/Latino/a/x	2	2%
Sex	Female	67	58%
	Male	44	38%
	(blank)	4	3%
Race	Asian	2	2%
	American Indian or Alaskan Native	1	1%
	Black or African American	5	4%
	White	105	90%
	Not reported	2	2%

Table 1: Demographics of survey respondents (629 total respondents)

Most people would recommend joining a study to their friends and family.

Would you recommend joining a research study to your family or friends?

Overall experience of participants

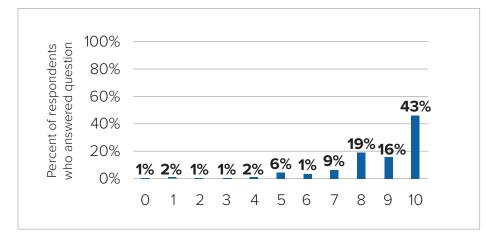

Participants were asked to score their overall experiences on a scale of one to 10.

The average score for all participants was 8.4.

For Hispanic participants the average score was 9.0.

For Black/African American participants the average score was 8.4.

Participants rated several areas highly:

- Our participants felt listened to.
- They were treated with courtesy and respect.
- They felt they had enough privacy.
- They felt their cultural background and their language differences were respected.

These are areas of the research experience where improvements should be made:

- We should improve communication about the study at the beginning and throughout the study.
- We should create ways to help our participants feel valued.
- We should evaluate our informed consent process so patients know better what to expect in a study.
