

HLA DQ2/DQ8 for Celiac Disease (HLACD)

Risk Assessment Update

Date: May 20th, 2024

Effective Date: May 28th, 2024

Interpretation of HLA DQ2/DQ8 for Celiac Disease (HLACD) is being updated based on current literature to identify 8 possible celiac disease-associated genotypes (previously 4) and their corresponding risk assessment. The genotypes and risk categories will be defined on each report with updated references. The test method remains unchanged.

If you have any questions please contact Angela Busacco, General Supervisor of the Histocompatibility Laboratory at Strong Memorial Hospital at (585) 275-0985 or angela_busacco@urmc.rochester.edu, or Dr. McMurray (contact information below).
