## Interferon Gamma Release Assay: Rebuilt

Date: October 11<sup>th</sup>, 2022

---

Effective Date: November 2<sup>nd</sup>, 2022

Our Interferon Gamma Release Assay (IGRA) for the detection of latent or active Tuberculosis has been re-built in our LIS and EPIC in order to utilize an advanced software interface with the test platform. Although Users will notice a difference in results presentation, the Test is unchanged and Test Ordering in EPIC is unchanged. Results will be presented with Test Interpretation and values for TB Antigens 1 and 2 in easy to read tabular form.
