

## Creatine Kinase MB (CK-MB): Change in Testing

Date: June 12, 2018

---

Effective Date: June 20, 2018

This change does NOT affect the creatine kinase (CK) assays typically used to assess for rhabdomyolysis.

Creatine Kinase MB Isoenzyme (CK-MB) tests will be sent out to an outside laboratory. The reference laboratory will perform both CK-MB and Creatine Kinase (CK) tests and calculate CK-MB Relative Index.

The outside lab's reference range will be reported with those results. Resulting will require 2-3 business days.

This change in practice reflects extensive consultation with URMC providers regarding current standard of care for cardiac markers.
