

QuantiFERON TB Analyzer: Delay in Testing

Date: July 7th, 2021

Due to an unexpected period of downtime with our QuantiFERON TB analyzer, we are experiencing delays in turnaround times for samples that were collected 06/28/2021 to present. The analyzer is expected to be back in service later today Monday, 07/07/2021, but it will take several days to process and result the backlog of samples.

We appreciate your patience as we work to resolve testing issues and subsequent delays in results.
